Distinct tissue-specificity of three zebrafish extl genes encoding proteoglycan modifying enzymes and their relationship to somitic Sonic hedgehog signaling.";

1. FUNCTION: Glycosyltransferase required for the biosynthesis of happaran-sulfate (By similarity).

1. CATALYTIC ACTIVITY: UDP-N-acetyl-D-glucosamine + beta-D-glucosaming-proteoglycan = glucuronosyl-(1->4).N-acetyl-alpha-D-glucosaminyl-proteoglycan =
 UDP + N-acetyl-alpha-D-glucosaminyl-(1->4)-beta-D-glucuzonosyl-
(1->4)-N-acetyl-alpha-D-glucosaminyl-proteoglycan.
CATALYTIC ACTIVITY: UDP-alpha-D-glucuzonate + N-acetyl-alpha-D-
glucosaminyl-(1->4)-beta-D-glucuzonosyl-proteoglycan = UDP + beta-
D-glucuzonosyl-(1->4)-N-acetyl-alpha-D-glucosaminyl-(1->4)-beta-D-
 DEFIGURATIONS TOTAL TO THE TOTAL TO THE TOTAL TO THE TOTAL TO THE TOTAL TOTAL TOTAL TOTAL TOTAL TOTAL TYPE II membrane protein. Endoplasmic reticulum (By similarity).

DEVELONMENTAL STAGE: Expressed zygotically. First detected at the DEGVELOPMENTAL STAGE: Expressed zygotically. First detected at the Degining of somatogenesis. At the 16-somite stage, restricted to posterior adaxial cells and, in the anterior, to cells adjacent to the neural tube and to ventromedial reignons of the somites. At 24 hours-post-fertilization (hpf), expressed in the ventral rhombomeres, telencephalon and olfactory bulbs. At 48 hpf, expressed in the brain, retina and fin buds.

SIMILARITY: Belongs to the glycosyltransferase 47 family.

Novel isolated mammalian anti-dual integrin antibody, useful for diagnosing or treating dual integrin related condition such as rheumatoid arthritis, gastric ulcer, asthma, atherosclerosis, restenosis.

Claim 1; Page 134; 144pp; English.

The invention relates to an isolated mammalian anti-dual integrin antibody having at least one of the human heavy chain or light chain complementary determining region (CDR, HC CDR1-CDR3, LC CDR1-3). Also included are the nucleic acids encoding the CDRs, a vector comprising the

```
nucleic acide, a host cell comprising the vector, an anti-idiotype
antibody that binds to the ant-dual integrin, a medical device comprising
the antibody suitable for administration by parenteral, subcutaneous,
intraamuscular, intravenous, intratrioular, intrabronchial,
intraachdominal, intracapsular intracartilaginous, intracavitary,
intracebebellar, or other routes as given in specification. The antibody
is useful for diagnosing or treating a dual integrin related condition in
animal for example, immune related disease such as rheumatoid
arthritis, gastric ulcer, asthma, allergic rhintis, Crohn's pathology,
sickle cell anaemia, diabetes, cardiovascular disease such as
arteriosclerosis, atherosclerosis, restenosis, angina pectoris,
mycardial infertion, infectious disease in a cell such as bacterial,
viral, and fungal infections, pneumonia, leprosy, malaria; malignant
disease such as leukaemia, chronic myelocytic leukaemia, Burkitt's
lymphoma, multiple myeloma; neurological diseases such as multiple
sclerosis, Parkinson's disease, spinal ataxia, Alzheimer's disease,
creutzfeldt-Jakob disease and many other diseases given in the
specification. The present sequence is an anti-dual integrin human
variable region containing at least one of the six CDRs listed above

 The present invention describes a protein comprising an immunoglobulin (Ig) heavy chain variable (VH) domain and an Ig light chain variable (VL) domain. The protein binds a complex comprising a major histocompatibility complex (MHC) and a peptide, does not substantially bind the MHC in the absence of the bound peptide, and does not substantially bind the peptide in the absence of the MHC. The peptide is a peptide fragment of gpl00, MUCI, TAX or TRERT. Also described: (1) a pharmaceutical composition comprising one or more nucleic acids for expressing the Ig that binds a comprising one or more nucleic acids for expressing the Ig that binds a comprising one or more nucleic acids for expressing the Ig that binds a comprising one or more nucleic, and does not substantially bind the peptide in the absence of the MHC; (3) an isolated nucleic acid comprising a first segment that encodes the Ig variable domain; (4) a comprising a first segment that encodes the Ig variable domain; (4) a now of the MHC of t
 novel protein; (5) a transgenic animal whose genome includes heterologous nucleic acid sequences that encode the protein; (6) identifying the protein that specifically binds the MK-Cepptide complex; (7) expressing an antigen-binding protein; (8) ablating or killing a target cell that displays a peptide on a surface MKC molecule; (9) treating or preventing a cancerous disorder in a subject; and (10) detecting an MKC-peptide complex in a sample. A protein of the invention has cytostatic activity, and can be used in gene therapy. The protein is useful for preparing a composition for treating or preventing a cancerous disorder. The present sequence represents the heavy chain of an antibody which binds to an MHC-peptide complex where the peptide component in as peptide fragment of
 New protein comprising an immunoglobulin heavy chain variable (VH) domain and an immunoglobulin light chain variable (VL) domain, useful for preparing a composition for treating or preventing a cancerous disorder.

 invention describes novel antibodies that immunospecifically bind to
 Bigging Stimulator (BLVS) polypeptides. BLVS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antitheumatic and antiAlDS activity and can be used in vaccines to inhibit the expression and activity of BLVS. The antibodies bind to BLVS and so may be used to detect and quantitate the presence of BLVS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLVS. They may also be administered to treat diseases associated with aberrant BLVS expression and activity such as cancer, immune, and autoimmune disorders and
 diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, mimunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP41228 represent the antibodies and fragments of the antibodies described in the method of
 Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders.

the live live iteraces to nove antibodies that insulpodies to the tumour consone 13934 and encodes a protein that is a member of the tumour necrosis factor superfamily and induces both in vivo and in vitro B cell proliferation and differentiation. Specifically, it refers to single chain antibody molecules (scrve) derived, preferably, from the variable heavy CDR3 region that immunospecifically bind to a polypeptide, or cragment thereof, of either human, murine, rat or monkey BLys. The present invention refers to the use of such antibodies in various methods for the detection, diagnosis and prognosis of diseases related to the berant expression or inappropriate function of BLys or its receptor. As such, these compositions are useful for identifying immune disorders including mysathenia gravis and multiple sclerosis, inflammatory as such as AIDS and proliferative disorders including leukaemia, carcinoma and lymphoma. Accordingly, they can be described as exhibiting various activities such as antirheumatic, antiarthritic, neuroprotective, antianthammatory, antianthamic, antianthamic, antianthamic, antianthamic, in antiphic form of the invention. NoTE: The sequence data for this patent did not form part of antianthamic and purious for the printed specification, but was obtained in electronic format

 The invention relates to vascular endothelial growth factor (VEGF)-2 antibodies are useful for treating, preventing or antibodies. VEGF-2 antibodies are useful for treating, preventing or disease or disorders, such as inflammatory diseases or disorders, tumour metastasis, breast cancer, brain cancer, prostate cancer, colon cancer, lymphangioma, an infectious disease, Rapossi's sarcoma, an autoimmune disease, rheumatoid arthritis, psoriasis, diabetic retinopathy, a disease or disorder associated with aberrant VEGF-2 (receptor) expression, or a disease or disorder antibody is also useful for detecting, dispnosing, prognosing, or monitoring cancers and other hyperproliferative disorders. VEGF-2 is also useful in gene therapy. The present sequence is human VEGF-2 hybridoma

 The invention relates to a specific binding agent, which comprises at least one peptide selected from any of 62 peptides (ABR55769-830) or its fragment. The binding agents are antibodies that recognize and bind to angiopoietin-2 (Ang-2). The specific binding agent, particularly the antibody, is useful for inhibiting undesired angiogenesis, treating cancers, inhibiting undesired angiogenesis, modulating or inhibiting Ang-2 activity, modulating vascular permeability or plasma leakage, or treating a disease (e.g. ocular neovascular disease, obesity, haemangioblastoma, haemangioma, arteriosclerosis, inflammatory disease, inflammatory disease, inflammatory disease, atherosclerosis, endometriosis, neoplastic disease, bone-related disease, or psoriasis) in a mammal. The present sequence represents a heavy chain variable region of an anti-Ang-2
 New specific binding agents (i.e. anti-Angiopoietin-2 antibodies), useful for inhibiting undesired angiogenesis, or treating e.g. cancers, obesity, hemangioma, arteriosclerosis, atherosclerosis or endometriosis.

 The invention comprises a human monoclonal antibody that binds to phospholipase A2 (PLA2). The monoclonal antibody of the invention is useful in the preparation of a medicament for the treatment of inflammatory and degenerative disorders stemming from inflammatory reactions in the joints, skin, and blood vessels, arthritis, psoriasis, asthma, Alaheimer's disease, atheroseclerosis, and restenosis. The present amino acid sequence represents the heavy chain from a monoclonal antibody that is specific for the human phospholipase A2 (PLA2) enzyme.

The invention relates to a novel isolated monoclonal antibody (mab) comprising a heavy chain polypeptide and light chain polypeptide having a sequence chosen from one of 53 fully defined anino acid sequences given in the specification, where the antibody specifically binds carbonic anhydrase IX (CA IX) tumour antigen. The antibody of the invention anhydrase IX (CA IX) tumour antigen. The antibody of the invention such as colorectal neoplasm, renal cell carcinoma, cervical intraepithelial squamous and glandular neoplasia, oseophagaal tumour or breast cancer, possibly via gene therapy. The current sequence is that of a murine-expressed anti-human CA IX monoclonal antibody VH (heavy chain variable domain) protein of the invention. The protein was generated via the introduction of the human CA IX protein into a

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       QVQLVESGGGVVQPGRSRRL.....ARGSYAFDIWGQGTMVTVSS 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

PIR 80: * 1: pir1: * 2: pir2: * 3: pir3: * 2 E 4

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

1g heavy chain V region - human (fragment)

C; Species: Hono sapiens (man)

C; Date: 22-Nov-1993 #sequence_revision 10-Nov-1995 #text_change 23-Jul-1999

C; Accession: Silvoi

R; Cutsinier, A.M.; Gauthier, L.; Boubli, L.; Fougereau, M.; Tonnelle, C.

submitted to the EMBL Data Library, June 1992

A; Description: Mechanisms that generate human immunoglobulin diversity operate from the

A; Reference number: Sils85

A; Accession: Silvoi

A; Retus: preliminary

A; Molecule type: mRNA

A; Readues: L-13 <CUT

A; Readues: L-13 <CUT

C; Superfamily: immunoglobulin V region; immunoglobulin homology

C; Superfamily: immunoglobulin homology <IMM>

F; 34-117/Domain: immunoglobulin homology <IMM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 8

Ig heavy chain V region - human (fragment)

C;Species: Home sapiens (man)

C;Species: Home sapiens (man)

C;Date: 22-Nov-1993 #sequence_revision 10-Nov-1995 #text_change 23-Jul-1999

C;Accession: S31674

R;Cuisinier, A.M.; Gauthier, L.; Boubli, L.; Fougereau, M.; Tonnelle, C.

8ubmitted to the EMBL Data Library, June 1992

A;Description: Mechanisms that generate human immunoglobulin diversity operate from the A;Reference number: S31585

A;Reference number: S31585

A;Ression: S31674

A;Reterence number: S31585

A;Ression: S31674

A;Status: prellminary

A;Residues: 1-139 cCIII

A;Cupersences: UNIPARC:UPI0000116476; EMBL:Z14204; NID:g30967; PIDN:CAA78573.1; PID

C;Superfamily: immunoglobulin V region; immunoglobulin homology

C;Keywords: heterotetramer; immunoglobulin

F;34-117/Domain: immunoglobulin homology <IMM>

"Amino acid sequence of the variable region of a human mu chain:
"Jocation of a possible JH segment.";
Proc. Natl. Acad. Sci. U.S.A. 77:3239-3243(1980).
-!- MISCELLANBOUS: This mu chain was isolated from the plasma of patient with macroglobulinemia.
-!- SIMILARITY: Contains 1 Ig-like (immunoglobulin-like) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;
